

EB-26017 (103116-01)

Hugo De Ruiter Serial No. 10/583,522 filed June 16, 2002

Translation of Claim 1 of Japanese Patent Office Reference 4-49968

[Claim 1] In a frame device for furniture with which a board body connects a lower end part with a side of a frame in which a cushion body is laid, and is set up. The above-mentioned board body consists of a hard plate which has elasticity, and two or more sandwiching pieces are formed by providing crosswise two or more slits opened to a lower end in this hard plate with a prescribed interval. A frame device for furniture pinching a side of the above-mentioned frame and fusing the above-mentioned board body to the above-mentioned frame with these sandwiching pieces.
